

# Effect of Equivalence Ratio and G-Loading on In-Situ Measurements of Chemiluminescence in An Ultra Compact Combustor

By Jason M. Armstrong

Biblioscholar Nov 2012, 2012. Taschenbuch. Book Condition: Neu. 246x189x7 mm. This item is printed on demand - Print on Demand Neuware - Using a spectrometer and high temperature fiber optics the relative intensities of the near-infrared, visible and ultraviolet radiation emitted from the  $C_2^*$ ,  $CH^*$ , and  $OH^*$  radicals were measured at eight discrete locations within the Ultra Compact Combustor test rig.

Blackbody radiation in the near infrared was also observed. The tests were conducted at various g-loadings and overall equivalence ratios and with various air hole configurations. These measurements were compared to determine the effect of these changes on the radiation emitted. Local  $C_2^*$  intensities were used to estimate the flame location within the combustor and the local  $CH^*/OH^*$  ratio was used as a gauge of the local equivalence ratio within the cavity. Results indicate the highest ratios of  $CH^*/OH^*$  occur in the outer radius of the cavity where the high g-loads transport the colder unreacted fuel and air. The highest  $C_2^*$  ratios also occur in the outer radius. A correlation between cavity equivalence ratio and  $C_2^*/OH^*$  was determined for these experiments as well. Fuel droplet size characterization was also conducted using a laser diffraction particle size analyzer. The...

## Reviews

*It is one of the most popular ebook. It usually fails to price an excessive amount of. Its been printed in an extremely basic way in fact it is merely right after i finished reading through this book in which really altered me, change the way i believe.*

-- **Sigrid Brown**

*Absolutely one of the best pdf We have ever read. I really could comprehended every little thing using this written e book. I am easily could get a satisfaction of reading a written publication.*

-- **Dr. Odie Hamill**
