Reviews

It is great and fantastic. I actually have read and so i am certain that i am going to going to go through once again yet again in the future. I realized this ebook from my dad and i encouraged this book to find out.

(Dr. Kayden Gerlach)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 20 pages. Original publisher: Reston, Va. : U. S. Geological Survey, 2009. OCLC Number: (OCLOC)494136458 Subject: Earthquakes -- Information services. Excerpt: . . . engineering results in regions where these data are available but still to calculate loss estimates in regions where little is known about the distribution and vulnerability of the built infrastructure. The empirical method uses reported losses from previous earthquakes to develop fatality-ratio functions (regional relations between ground-shaking intensity and fatalities). Following future earthquakes, these fatality-ratio functions will be combined with estimates of the population exposure at different intensity levels to provide fatality estimates. The methodology is most robust in regions that have experienced several large historic earthquakes and have well-documented fatality data. It is applicable to any regionalization with sufficient a priori constraints. PAGERs initial empirical models primarily use a country-based regionalization. Countries lacking historical data are assigned fatality-ratio functions derived for countries with similarly built environments. The semi-empirical and analytical loss models rely on a country-based building inventory (Jaiswal and Wald, 2008) and building vulnerabilities developed for use by PAGER. The key distinction between the semi-empirical and analytical methods is that the semi-empirical method uses intensity-based, collapse-probability functions primarily derived from expert opinion while the analytical method uses physics-and engineering-based collapse-probability functions obtained using spectral response and the capacity-spectrum approach (for example, Lin and Chang, 2003). The empirical model does not require knowledge of the building inventory and therefore it cannot be employed directly for impact assessments beyond fatalities - the data used in its calibration. Alternatively, both the semi-empirical and analytical approaches require at least basic build. . . This item ships from La Vergne,TN. Paperback.
