Collected studies on the pathology of war gas poisoning from the Department of Pathology and Bacteriology, Medical Science Section, Chemical Warfare Service, under the direction of M.C. Winternitz

By Milton C. Winternitz

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 54 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1920 Excerpt: . . . to 1 cm. along the crests of the muscular ridges. The heart is otherwise normal. Lungs: Wt. 320 gm. Vol. 330 cc. The lungs are voluminous but not extremely so. Pleura is smooth, but looks thick and slightly opaque (edematous), giving the suggestion of a film over the lung. The lungs are unusually colored, being a dusky, bluish red or pink, distinctly cyanotic with a semi-translucent quality over all. Here and there are light, whitish patches, but these are neither large nor numerous (as in phosgene cases). In such patches there is crepitation, but practically everywhere else the lung is doughy arid airless (Fig. 1). On section, clear fluid and blood pour out like water from a squeezed sponge. The tissue is red and semi-translucent with occasional lighter, air-containing patches. Near the margins of the upper lobes, there are a few small emphysematous areas. The bronchi,...
