## Phenomenological Process Simulation and Multiscale Tool Simulation directed to a Hybrid Forming Process

By Kim-Henning Sauerland

Shaker Verlag Jun 2013, 2013. Taschenbuch. Book Condition: Neu. 209x149x22 mm. Neuware - The present work covers the phenomenological process simulation and the multiscale tool simulation directed to a hybrid forming process. Thereby, the focus is specifically directed onto the forming tool, which is subjected to cyclic thermo-mechanical loading conditions during tool life. In the first part of this thesis an experimental and simulative methodology is introduced and applied for the determination of reference values for tool lifetime. Thereby, essential steps are the choice and application of an appropriate material model for the forming tool, the identification of material parameters using stress/strain experiments and least-squares functionals, the numerical simulation of the hybrid forming process, the experimental validation of the simulation and the performance of fatigue tests with thermomechanical boundary conditions obtained from the numerical simulation. The developed methodology is capable to quantify the thermo-mechanical loading of the forming tool during the hybrid forming process. Further, it delivers reference values for tool lifetime based on the numerical results. Regarding the multiscale tool simulation in the second part of this thesis coated forming tools are considered. Here, essential steps are the development of a theory for a two scale model considering multi-layered...

### Reviews

*Complete guide for publication enthusiasts. I have read and i am sure that i will going to study again once again in the future. Your way of life period will be transform once you total looking over this publication.*

-- **Shayne O'Conner**

*This composed publication is great. It is one of the most remarkable publication i have got read through. I am just quickly could get a delight of looking at a composed book.*
