When rectangular coordinates are used, the expression for the area generated by a line parallel to the axis of y and terminated by two curves is Let AB , in Fig. 13, be the initial, $o A c$ and CD the final position of the generating line, then the area is $ABDC$, which is enclosed by the curves yy and yy and by the straight lines AB and CD . If in equation (1) we substitute for $y_2 - y_1$ the equivalent expression dy , we have. $U \int I - 2 \int 4 dx$, (2) $J a iy$, which expresses the area in the form of a double integral. In this double integral the limits y_2 and y_1 for y , are functions of x , while a and b , the limits for x , are constants. 122. If the area is that of...
