Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from The Moral Hazard Theory of Corporate Financial Structure: Empirical Tests The development of the theory of optimal corporate financial structure has been based on the critical assumption that the value of the equity is maximized at the level of debt which maximizes the market value of the firm. Recently, however, Myers(1977) illustrated the breakdown of that assumption under very plausible conditions. Those conditions produce a conflict between bondholders and stockholders, leading to the application of the term moral hazard. This paper is an attempt to use a large sample of firms to test the moral hazard theory against others found in the literature. Although the tests cannot conclusively prove one theory correct and the others incorrect, they will add information which may be of value in further theoretical development. Section I reviews the theory of optimal capital structure. Section II describes the moral hazard theory. Sections III and IV describe the tests and the results.
